Raw item: "As a user, I want to reset my password via an e-mailed link so that I can regain access."
Subword tokens (WordPiece or BPE), L = 64
[CLS] as a user , i want ... [SEP]
Token + position embeddings
Transformer blocks (6 or 12), all weights updated
back-prop
First-token state -> classifier head (dropout, dense layers)
softmax over K labels: p(y | x)
training
Class-weighted cross-entropy (Eq. 1), AdamW, warm-up/decay
Label + confidence p_max, passed to the confidence gate
